

## EFFECTS TUTORIALS

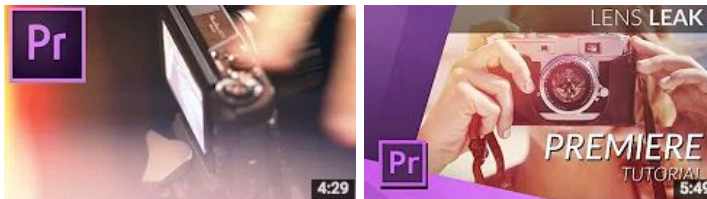

### VIDEO/FILM

Create your own special effect videos using guidance from the tutorials below. Your videos can be different from the tutorials but should include the same general type of effect. Most effects will require you to shoot new video footage to work with; you or a classmate may appear on camera, but each person should shoot or make their own original content.

You should have at least one video for each effect. Post each video to your blog site upon completion.

- **LIGHT LEAKS**

**Additional Instructions:** Shoot 5-10 cinematic shots and create a sequence with Light Leaks. Set your edited sequence to any music of your choice.

**Note:** The shared Envision Cinema folder (where you turn in your work) has 5 premade light leak clips you can use for this tutorial or you can find your own online.

- **SIMPLE GREEN SCREEN**

- **SUPER SPEED EFFECT**

Use any of the following tutorials to help with your Super Speed effect:

- **SUPER FLYING EFFECT**

- **CLONE EFFECT**

After learning the Clone Effect, you might want to try cloning yourself or other objects multiple times or try the Freeze Frame Clone Effect.
